

# DOUBLE-GUSSETED STAND-UP POUCHES

## Deliver Performance and Environmental Benefits

Taking the popular 'bag-in-box' concept to a new, more environmental friendly level, CLP Packaging Solutions and ITW Fastex have developed a revolutionary Bag Without A Box line of double-gusseted stand up pouches, each featuring a specialized ITW tap.

Bag Without A Box pouches deliver many important features for liquid packaging. Among these are: 2, 3 and 5 liter capacity, eliminating the cardboard box surrounding the pouch. High-barrier performance laminates are available with or without aluminum. Sturdy stand up dispensing performance, from the first drop of product to the last. An assortment of beautiful, high-performance taps, including ITW's Tru-seal® and Unitap® fitments. Can be filled on standard Bag-in-Box packaging lines.

The elimination of the cardboard boxes in large-pouch applications makes Bag Without a Box a clean, greener technology. Tons less waste. No breeding ground for bacteria and pests. Smoother performance on the packaging line and elegant look and feel of gravure- or flexo-printed graphics.

Bag Without A Box features a wide variety of high-performance laminates designed for an array of applications, including:

- **Retort** – sauces, purées, soups, gravies and broths.
- **Aseptic** – wine, juices, teas, soft drinks, yogurts, fruit purée and smoothies.
- **Hard-to-hold** – household cleansers and institutional chemicals, soaps and shampoos.

Whether it's replacing a bag-in-box pack, #10 cans, or other rigid containers, Bag Without A Box performs – efficiently, effectively, clean, and 90% waste saver.
