## In-Mold Labels For Injection (IML-I)

Few labeling technologies are as elegant – or reliable – as the fusion of label and container. Placing an In-Mold Label into a container mold just before the container material is introduced creates outstanding packaging that is especially suitable for:

- A graphic, seamless, no-label look
- Refrigerated or frozen food
- Markets where recycling is highly desirable
- Soft-sided containers that can be difficult to label
- Low cost in large quantities
- No additional labeling process is required

Tadbik Pack's technology has taken IML-I to new heights with even larger labels available, innovative IML-I tear-off coupons, and a variety of finishes.

Our unique printing technology allows us to offer not only quality printing, but also a variety of film thickness's from 30µ-180µ.
